Kaslo

Kaslo, with a population of just 1,000 is actually the largest community on the main body of Kootenay Lake. Kaslo is nestled in a valley, surrounded by a lush forest and Kootenay Lake. Downtown is thriving with artisans and artists, and a beautiful park with pristine beaches lines the village. Heritage buildings have been lovingly restored, along with the S.S. Moyie, the world's oldest intact sternwheeler.

The area's waterways and surrounding mountains provide plenty of opportunity for outdoor adventure.

Outdoor Recreation

Explore Kootenay Lake in a powerboat, sailboat, kayak, or canoe. Renting a houseboat from Kaslo's Shipyard's fleet is another option. Go hiking on groomed trails or wilderness terrain in provincial parks. There are no less than five of these (and one rugged conservancy) nearby, including the stunning Kokanee Glacier Provincial Park. Boating, sport fishing, swimming, water-skiing, kayaking, canoeing, scuba diving, hiking, mountain & tour biking, ATV touring, golfing, horseback riding, cross-country skiing, snowmobiling, cat-skiing, heli-skiing, paragliding.

COMMUNITY INFORMATION

Meadow Creek Spawning Channel

The spawning channel is open to the public for the duration of the spawning season, unless there is unusually high bear activity. Walkways and an interpretive site allow visitors the opportunity to learn about this wonder of nature. It is located 4 km north of Meadow Creek off Highway 31. The gate is open from 10am-2pm, daily, from late August to early October. If gate is closed, there is no access that day (please respect as this is usually due to high bear activity and is for your own safety).

Duncan Dam

Kootenay Lake was dammed in 1967. The Duncan Dam, a 40 metre earthfill dam with no power generation facilities, was the first of the three Columbia River Treaty dams to be built in the Canadian section of the Columbia River Basin. It was designed to control the flow of water from the Duncan River into Kootenay Lake. The Duncan is the tributary that provides about 13% of the water flowing into Kootenay Lake. As the dam neared completion, the valley bottom was cleared of large trees, the original residents of the community of Howser displaced, and some farms and orchards were flooded. When the water began to rise and fill the new reservoir, the original Duncan Lake increased in size from 25 km to 45 km in length.
